

SQA Internship Day1 Report (app.hisabdo.app)

Name: Ramna Raheem

Track: Software Quality Assurance (SQA)

What I completed: Completed the Day 1 practical task by testing the assigned application, creating test cases, identifying issues, and documenting the results.

What I learned: Learned how to test an application from a QA perspective, create test cases, identify bugs, and understand Severity and Priority.

Problem I faced: During functional testing, I identified a defect in the Add Customer, Add Expense, and Add Income features. The form could be filled out, but clicking the Save button did not save the entered data and provided no feedback message to the user. The issue was also reproducible with a newly registered user account.

How I solved it: I reproduced the issue with a newly registered user account and then tested the same features in Demo/Guest Mode. The **Add Customer, Add Income, and Add Expense** features worked correctly in Demo/Guest Mode. Based on this comparison, I observed that the issue appears to be specific to newly registered user accounts, while the Demo/Guest Mode uses preconfigured data and functions as expected. I documented this difference as part of my defect investigation.

What I plan to work on next: Continue learning manual testing, bug reporting, test case design, and the software testing process.
